

Infant Measuring Rod

KEY FEATURES

The DS1125 infant measuring rod provides an accurate measurement tool that can be brought to the patient or mounted on a wall or pediatric examination table. Precision engineered and constructed of heavy gauge aluminum, the Doran DS1125 infant measuring rod will provide accurate height readings for years and years.

We have made reading a measurement easy and virtually error-free. Simply flip the measurement arms away from the rod and slide the arm into position. The patient's length is highlighted with Doran's signature, easy-to-read, bright red line.

Marked in centimeters and inches, the DS1125 measuring rod can be used to measure adult or pediatric patients.
