

Infant Lactation Scale

KEY FEATURES

Our most accurate infant lactation scale, the DS4500, has a 45lb capacity with weighing sensitivity to track even the smallest weight changes. This unit's advanced, best-in-class features include one-button *Feed Function* for recording before/after feeding and amount fed. The lactation feature includes single fed mode with total amount fed and left / right and total fed mode. At the completion of weighing left / right, the results can be reviewed. Plus, audio signals indicate scale status, allowing attention to be focused on the patient, rather than the weight display. The smart, one-piece construction design allows for easy cleaning and sanitation. Ideal for moms and lactation consultants in determining milk intake. State-of-the-art but affordably priced.

- Large platform measuring 25" L x 11" D with curved sides for infant safety
- Lightweight and portable with exceptional build quality
- Battery or AC power for continuous operation
- *Reweigh* feature allows the infant to be weighed again without removing the infant from the scale
- Quickly switch between lb, lb:oz or kg
- EMR ready with USB port
- Rubber feet to maintain stability
- *Units Lock* feature – This allows the user to lock in the desired unit

SPECIFICATIONS

Warranty:	Three Years
